

DEURES D'ESTIU

MATÈRIA:	Matemàtiques (Anglès)
CURS:	

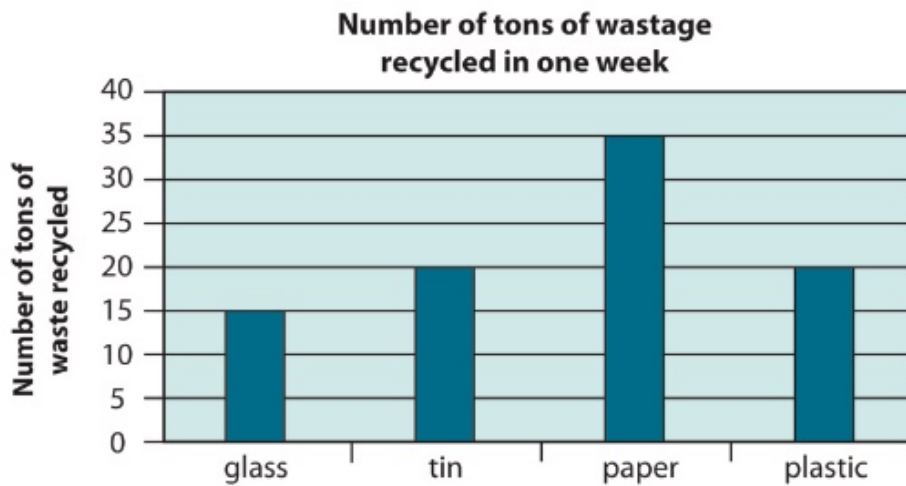

So, let's finally do some mathematics in English ;-)
Hoping you'll enjoy it, I wish you the best for these days,
Gloria

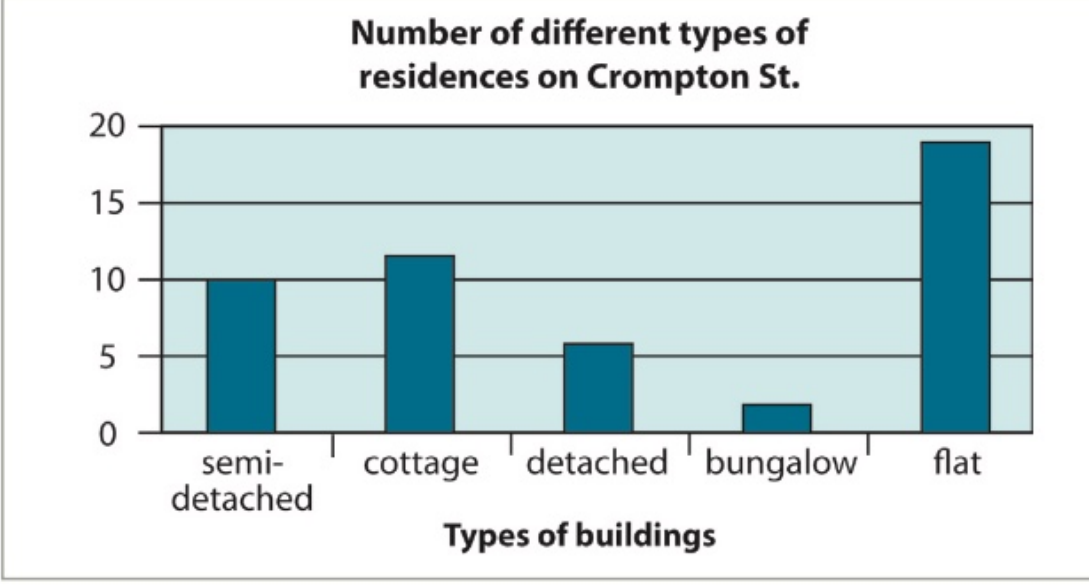

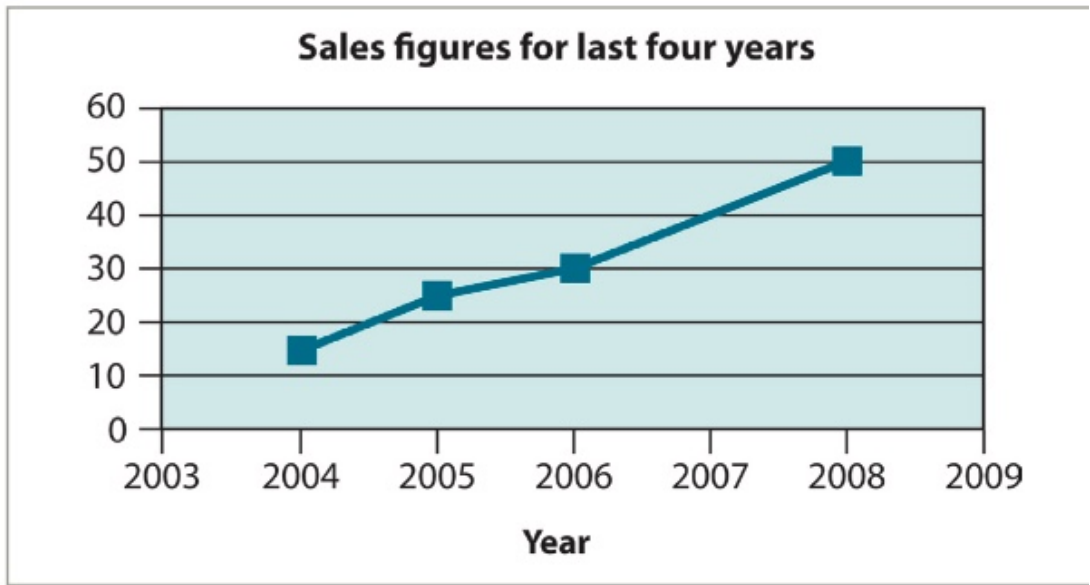

Task 1. The following graphical summaries have some missing features that are written in the attached cards.

Paste both, the cards and the graphics, onto a piece of paper and to connect any matches by drawing in arrows between them.

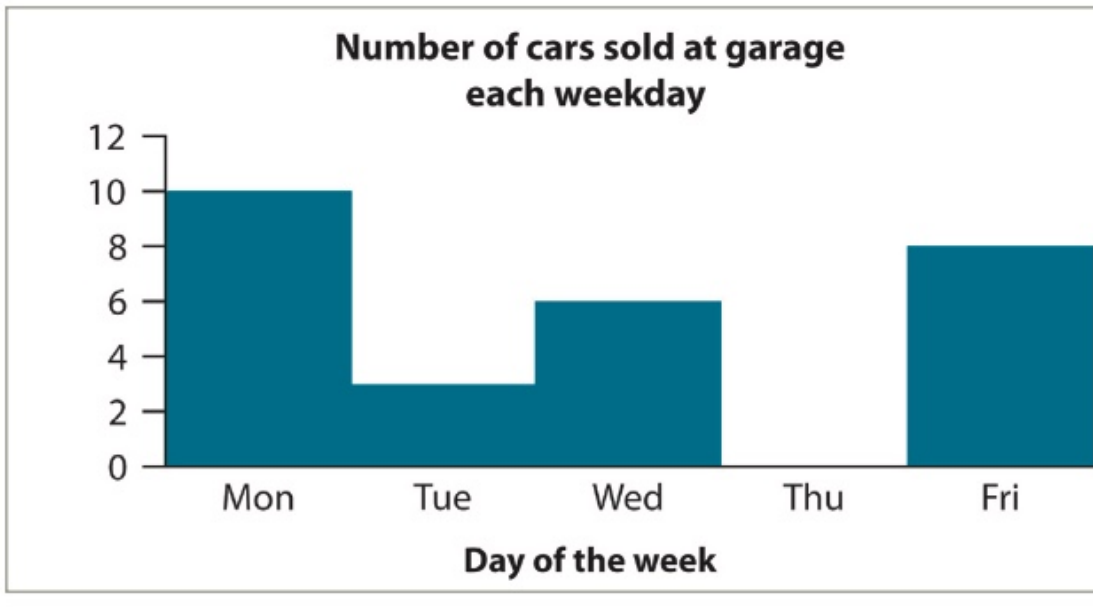

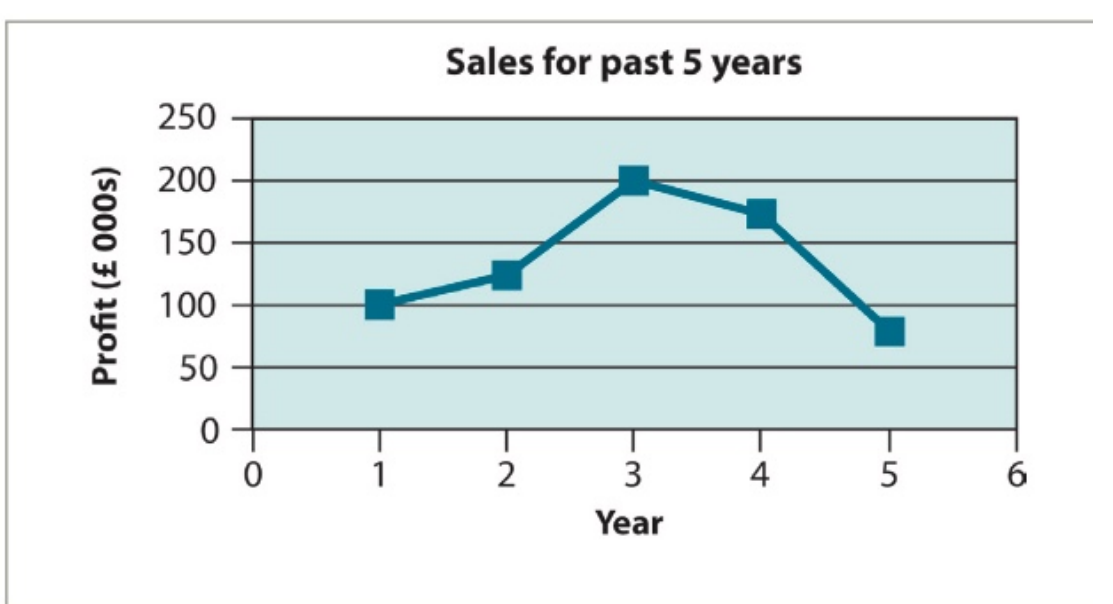

Hint. There are some multiple matches.

The key is missing.
The title is missing.
The horizontal axis is not labelled.
The vertical axis is not labelled.
The horizontal scale is inconsistent.
The vertical scale is inconsistent.

**Litres of petrol bought by Mrs Jones
for past five weeks**

Marital status of people at a party

Task 2. Create appropriate titles and labels where they are missing and correct any inconsistent scales.

Task 3. Complete the following mind map, about graphical summaries, with the missing information. You can add as many forms as you need

Now it's time to take a look to your previous knowledge on statistics playing this "noughts and crosses" (3 en ratlla) game.

[\(Si no pots contactar amb cap company, no et preocupis: passa directament a la tasca 6 i ajuda't del Glossary que tens al final de la tasca 5 per fer-la!\)](#)

Task 4. Organize yourselves among the class (may you use some social network to do so) to split between two groups
My teammates are,

Task 5. Take a look to the following "noughts and crosses" in the blackboard. Next you find a copy of it,

Population	Frequency table	Ordinal variable
Bar chart	Sample	Mode
Median	Discrete data	Symmetry

Team A will compete against team B according to the following rules,

1. Toss a coin to fix who (group A or B) will be noughts and play first, and who will be crosses and play second.
2. The winner team chooses one word, each member writes his/her own definition in the given space of Task 6 and whispers together to agree on an explanation. They write this down in a card and explain it to their partner team (other group team).
3. If they agree (you teacher ggarci76@xtec.cat is the final judge...) the whole group writes a nought in the word box of the grid.
4. Now it's time for the crosses group.

Keep playing till one group completes a line and wins.

You can check the other team responses at this,

<https://seniorsecondary.tki.org.nz/Mathematics-and-statistics/Glossary>

Task 6. Write an explanation for the following words,

Bar chart:

Discrete data:

Frequency table:

Median:

Ordinal variable:

Population:

Sample:

Symmetry:

Mode:
