## MEDITERRANEAN

### •BODY OF WATER

The Mediterranean Sea is a sea that connects with the Atlantic Ocean and has an area of 2,500,000 km<sup>2</sup>.It is used to transport ships with containers, tens of millions of containers loaded with all kinds of merchandise that are transported every year,

### •HOW CAN WE TAKE CARE OF THIS SEA?

People in our culture take care of the Mediterranean Sea in a lot of ways, one of these things is recycling our rubbish in the correct container instead of throwing everything into the same trash. Other things that the people in our culture dcould do is to take care of the Mediterranean Sea is not using plastic things like forks, glasses or plates that contaminate the sea.

We think that we could do more things to take care of it because this sea is very exploited.

### •ECONOMY

The Mediterranean is economically important, it can be used to extract materials used in construction: limestone, plaster, marble, granite, kaolin, clay. It allows maritime transport with all types of goods. Tourism is also very influential as many tourists come to swim, do water sports or simply visit cities next to it. Fishing is one of the strengths of the Mediterranean as a large amount of fish is caught every day, overfishing is another problem that has to be considered.

### •FOR THE FUTURE

- Save water
- Use water from the rain to water the plants and wash the cars
- Don't throw garbage into the sea
- Turn off the taps well throughout the house
- Revision of the pipes and water system regularly.
