MEDITERRANIAN SEA

People use this body of water for go fishing, for trading and for leisure purposes.

This body of water is important to the city's economy because it greatly favors trade since many foods and products can be transported with ships. Also in history because the Romans arrived along the coast of the Mediterranean Sea. The Mediterranean sea also greatly favors tourism. the only drawback is that the boats pollute a lot and the overuse of fresh water.

To care for this body of water, people can recycle and don't pollute. People can also not fish as much because the boats pollute a lot and the overfishing is a real problem just now.

PROPOSALS TO IMPROVE THE CITY WATER SYSTEM

The steps to improve Rubí water system are:

- we should clean dirty water of all the streams where there is dirt.
- Don't sell so many plastic bags and cloth bags because plastic bags, in addition of polluting a lot, is dangerous for marine animal.

Many other actions can be done...write us and give more ideas, we will add them in our web and send the proposals as a request for the Town Hall.
